AI & Automation Consultant | autonomous AI agents · n8n workflow orchestration · LLM-backed apps & PoCs · enterprise API integration

Professional Summary

I build autonomous AI agents and intelligent workflow automation — and I take them past the proof-of-concept stage into production. Since 2022 I have improved business processes with technology (bottom-up at UPS GBS, then professionally at MJ.OLDAK), and I use LLMs operationally every day (Claude via API and Claude Code, Gemini). My core is a **PoC-builder mindset that ships**: I prototype fast in Claude Code, Cursor and Lovable, then harden the winners — out of dozens of experimental agents I brought 4 to production-ready for SMEs. My automation backbone is **n8n** (a production pipeline exposed as an MCP tool), with Make and Apps Script alongside; I integrate enterprise digital systems and SaaS through REST APIs and webhooks. I decide *whether* a process should be automated or redesigned using BPMN AS-IS → TO-BE mapping and a compose-vs-build framework. Compliance and governance are designed in from day one — GDPR Art. 22/28, human-in-the-loop, **ethical AI and data privacy** by default (a legal background reinforces this). I translate technology into plain language and provide hands-on training, documentation and knowledge-sharing.

Work Experience

MJ.OLDAK — AI & Automation Consultant (Agentic AI) | 2026 — present

- **Autonomous AI agents & LLM PoCs**: designed, built and tested LLM-backed business applications — 4 production-ready products (invoice OCR → structured data, email assistant with classification + auto reply drafts, tax-deadline agent, PDF report generator); rapid PoC iteration in Claude Code, Cursor and Lovable (clickable demo at demo.mjoldak.pl).
- **Intelligent workflow automation (n8n)**: production pipeline Webhook → Gemini → Supabase EU Frankfurt, **exposed as an MCP tool** for AI agents; Make.com and Google Apps Script for lighter flows — turning legacy, manual steps into an automation-first flow.
- **Enterprise integration**: connecting digital systems and SaaS through REST APIs and webhooks (Supabase/PostgreSQL with RLS, Azure Document Intelligence, MCP); lead-classification (CRM-adjacent) agent for a B2B sales pipeline.
- **Governance & best practices**: compose-vs-build decision framework, Given/When/Then acceptance criteria, BPMN process mapping, and deployment patterns with DPA / EU-data / human-in-the-loop — defining how AI agents ship safely.
- **ML use cases (classification)**: GenAI lead scoring (HOT/WARM/COLD with reasoning) and email triage into 5 categories.
- **Enablement**: plain-language user manuals (PDF), a 15-min demo script with objection handling, pilot onboarding, adoption led with the ADKAR model; discovery with Mom Test rigor (4 in-depth interviews).
- **Multi-LLM, hands-on**: Claude (API + Claude Code) daily, Gemini; prompt engineering with explicit assumptions / testable success criteria / surgical scope; multi-LLM routing with provider abstraction.

UPS Global Business Solutions Poland — Database Administrator → Senior Database Administrator | 09.2022 — present, Wrocław

- Administration of customs-clearance databases (imports to the UK, ~100 declarations/day) in a **fully English-speaking environment**; promoted to senior administrator in ~2 years.
- Bottom-up automation of repetitive tasks (Excel macro calculators, SOP instructions) in a heavily regulated corporate setting — practical experience of rolling out change where adoption is slow.

Projects

- **Production n8n pipeline**: Webhook → Gemini → Parse → Supabase EU Frankfurt; green end-to-end, **exposed as an MCP tool** (instance-level MCP) so AI agents can call it.
- **Sales Agent B2B (live demo)**: demo.mjoldak.pl — form → GenAI lead classification (HOT/WARM/COLD with reasoning) → database with RLS; GDPR Art. 22 + PKE Art. 398 compliant.
- **Sales-agent pilot for a B2B client** (industrial chemicals): spec → onboarding → working lead-classification agent + methodical templates (PRD, ROI, BPMN).
- **AI-ecosystem monitoring routine**: 26 sources every 3 days (scraping + Claude classification) → adopt/watch/skip — staying ahead of emerging agentic AI trends.

Skills

- **Agentic AI & LLMs (daily):** Claude (API, Claude Code), Gemini; autonomous agents, LLM frameworks, prompt engineering, multi-LLM routing, provider abstraction
- **Workflow orchestration & automation: n8n (workflow + MCP),** Make.com, Google Apps Script; modern workflow automation as an alternative to traditional RPA
- **PoC / rapid prototyping:** Claude Code, Cursor, Lovable — no-code/low-code to production-ready
- **Enterprise integration:** REST APIs, webhooks, SaaS and CRM-adjacent systems; Supabase/PostgreSQL (RLS, EU), Azure Document Intelligence
- **Process & governance:** BPMN 2.0 AS-IS → TO-BE, compose-vs-build framework, user stories (INVEST), Given/When/Then, discovery (Mom Test), iterative/agile delivery
- **Ethical AI & compliance:** GDPR (Art. 22, 28), Polish PKE Art. 398, human-in-the-loop, data privacy & security by design
- **Programming (AI-assisted):** Python, FastAPI, SQL

Certifications

- Google „Umiejętności Jutra: AI“ (Skills for the Future: AI) — exam score 98% (49/50), 2026

Education

- Business Psychology — University of Lower Silesia (DSW), Wrocław (Bachelor's, defense 2026) — qualitative research (interviews, thematic analysis in MAXQDA); designing around the user's mental model
- Earlier: Law (Łazarski University), Computer Science (WWSI) — foundational coursework

Languages

- Polish — native | English — full professional working proficiency: 3.7 years in a 100% English-language environment at UPS GBS (formal self-assessment B2; C1 in daily operation)
